This frame tank is an open top iron framed storage tank. It is fast to assemble and compact when stowed, making it ideal for emergency situations as well as other storage applications.

The treated iron frame is quick and easy to assemble with slide fittings, so there is no need for tools. The iron frame provides a strong sturdy support for the tank body and additional weight for stability in flooded work sites.

It is suitable for a range of applications, including oil spill recovery, oil/water separation, effluent containment, temporary storage, fire fighting, pressure washing and water storage.

The tank can be supplied with a discharge valve assembly for easy draining, and a storage box.

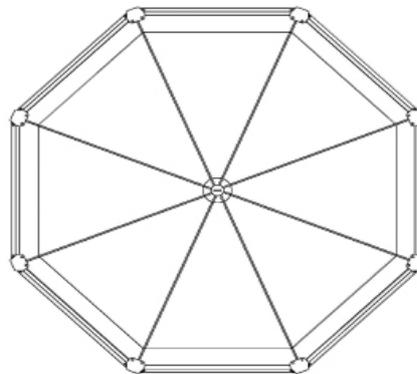

This frame tank is made from PVC coated fabric which is a flexible, weather and oil resistant material.

The tanks have RF welded seams which provide strong seams for strength and integrity.

The frame tank can also be supplied with an integral ball valve for easy drainage.

Product Benefits:

- Fast to assemble
- Stable temporary storage
- Compact when packed

	Capacity	Dry weight/Dimensions when packed
