VikoSeal Pier Sealing System

VIKOMA

Protecting our environment over 50 years

A unique pier sealing system to protect against oil spills during fuelling operations

- Highly effective boom system
- High quality neoprene for durability
- Long term solution
- Alternative to traditional boom surrounding boat
- Accommodates tidal movements
- Time saving solution
- Reduced manpower for deployment

Our VikoSeal Pier Sealing Systems provide an efficient solution for primary containment of oil spills on open piers.

Legged piers have historically provided a challenge when it comes to oil containment of spills during bunkering and transfer operations.

Our pier sealing containment system overcomes the challenges and is permanently installed with minimal operator input to engage after the docking procedures are complete. A vessel will moor alongside the system and create a primary containment zone for any oil spilled during operations.

A system will combine a foam filled neoprene boom along the length of the pier with hammerhead VikoSeal booms, together with sliders, to accommodate the rise and fall of the tide. The system can be configured to enable the VikoSeal booms to be raised when not in use and lowered into position once the vessel is alongside. This saves time and money compared to traditional oil containment booms.

The flexibility and strength of neoprene works perfectly and provides a long term solution as an alternative to surrounding vessels with oil containment boom.

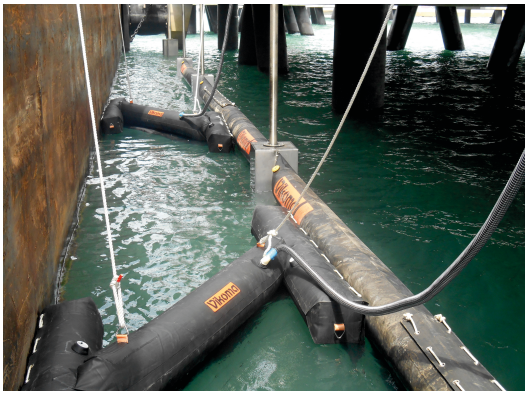

VikoSeal can also be used as a standalone solution without pier sealing in ship to ship or ship to shore transfer operations and is expandable with interchangeable mid sections for the perfect fit.

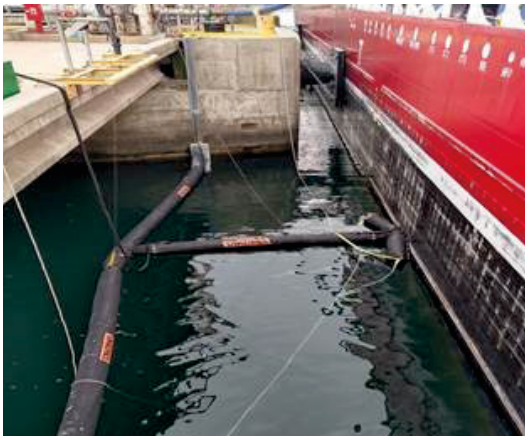

Product Benefits

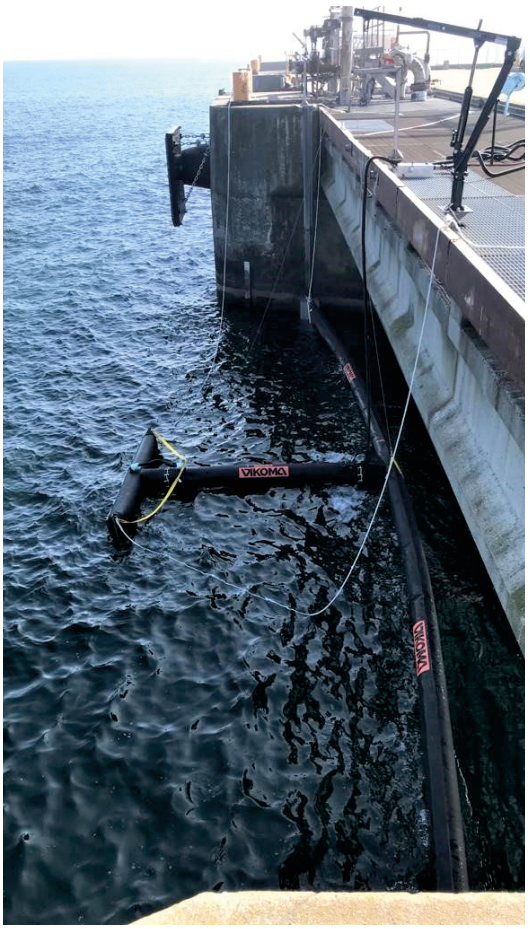

- High abrasion resistance
- High tensile strength
- System can be tailored to suit environment
- Efficient, timesaving, cost effective solution
- Accommodates tidal movements
- Minimal operating personnel

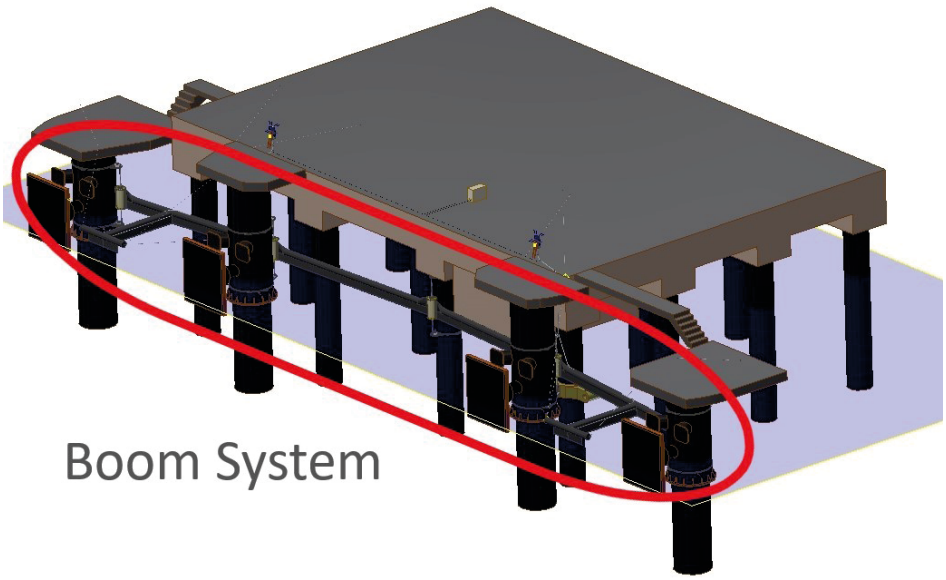

Optional Extras

- Repair kits
- Spare mid section
- Hammerhead abrasion protection strips
